

Approx. weight 5Kg

#### Description

Pedestal made of high durability plastic material (base and tip - PE, body - PVC, cover - ABS) with concrete base (approximate assembly weight: 5.0 kg) and metal hooks for mounting of chains or isolation bars (we recommend a distance of 1.5 meters between pedestals for their total efficiency in the utilization of chains, balance and isolation bars)

#### Application

Signaling, flow guidance, isolation and demarcation of areas in indoor and outdoor environments.

#### Differentials

Base manufactured in one single piece, without a cover at the bottom, which does not allow the leakage of concrete residues which fill the base, besides not promoting scratches to the floor with rivets and screws in the base, as occurred in most of the options available in the market. Weather resistant, stainless, metal hooks and a design far superior to all the others on the market. Ball-shaped tip which enables the use in any environment, from industrial to classic.
